Request Process Flow 请求处理流程

Request Process Flow

Tomcat处理进来的请求的过程

This page describes the process used by Tomcat to handle an incoming request. This process is largely defined by the Servlet Specification, which outlines the order of events that must take place. 这个过程主要是由Servlet规范定义的

diagram

请求处理过程的UML序列图

A UML sequence diagram of the request process is available [here](#).

comments

在请求到达Servlet之前，使用 监听器监听或过滤器修改 请求处理过程。

The Servlet Specification provides many opportunities for listening in (using Listeners) or modifying (using Filters) the request handling process even before the request arrives at the servlet that will handle it.

Servlet将处理这个请求
